

RHODIUS

**more simple
simply more**

More simple

Improvements in productivity and efficiency are demanded everywhere you turn in the working world. Tasks are becoming increasingly more complex. The professional processing of metal and stone becomes very simple with our product and services solutions. We can offer the ideal tool for every use. You can concentrate on your project; the right grinding tool for your task comes from Rhodius. If you are ever faced with a special challenge, our specialists will be able to come up with a bespoke solution. Quick and easy.

Simply more

Anyone who places serious demands on his work will not be content with mediocre tools. Grinding tools from Rhodius stand for top performances in cutting, grinding, milling and polishing. Our goal is to offer you a service package to exceed your expectations with clever solutions and efficient products. Of course, we work to suit your requirements and offer precisely the service you really need.

It's all about one thing

For many they are simply tools; for us, grinding tools are a passion. Our family-run business has developed and produced professional tools of the highest quality for over 60 years. It is with this dedication that we continue to pursue our goal of making exceptional products and services even better. Our focus is on providing you satisfaction after solving the challenges you put on us.

One thing applies for all

No matter how different the applications and materials are, our tools offer maximum benefit and an outstanding price-performance ratio. Rhodius specialists are constantly analysing applications, materials and markets. Our engineers optimise and develop perfectly fitting products on this basis – without losing sight of the individual needs of our customers.

In discussion with many industries

If you want to distinguish between good tools and first-class solutions, you have to talk to professionals who work with the products every single day. That's just what we do. We optimise the performance of our products and develop new and, if necessary, customised solutions for you. Our experts from a variety of industries, are available for individual meetings with you.

The talk of many industries

We see ourselves as a partner for professional users. Which is why we supply cutting, grinding and polishing advice and know-how, along with the perfectly matching tools. We help make your work more efficient, easier and safer with training and advice over the phone, online and personally on the spot.

Simple solutions are the hardest

Our passion for grinding tools leads to innovations that cut down on operations and accelerate processes, or even make these possible for the first time. When it comes to making your work easier, we don't take things easy. This drive for improvements and simple solutions can be found throughout our entire assortment, which is tailored fully to your needs.

Hard jobs become simple

Seeing a problem as a challenge is one of the keys to our success. Good examples of this attitude are our BRAINTOOLS – a separate product line that offers unique solutions for special tasks. Simply because it is possible to make things easier.

Safe tools from Germany

Our engagement for your safety

Grinding tools can be potentially lethal if used incorrectly. The European manufacturers have thus prepared safety instructions in the form of leaflets and brochures through their associations VDS (German Abrasives Association) and FEPA (Federation of European Producers of Abrasives). These can help you minimise your personal liability risk. You can download the FEPA safety recommendations as a PDF for free from www.rhodium-abrasives.com and www.vds-bonn.de

oSa-manufacturers guarantee safety.

oSa stands for "Organisation for the Safety of Abrasives". Leading manufacturers of quality abrasives have joined together in this international organisation to document the high safety standard of their brand and quality products. Rhodius is a founder member of the oSa and is participant in ensuring and further developing the oSa goals.

What does the oSa-symbol mean for you?

Tools with the oSa trademark symbol has been manufactured according to the world-wide strict guidelines of the oSa. All Rhodius cutting and grinding tools bear the oSa trademark and thus meet the highest safety standards. Rhodius is also a founding member of the oSa.

The promise of Rhodius

Rhodius is a leading manufacturer of grinding tools and meets all the requirements of national and international laws, standards and guidelines. Our quality management system is certified according to EN ISO 9001 and thus guarantees compliance with all regulations.

Trust is good. A guarantee is better.

Buying without risk — with satisfaction guarantee

We are only satisfied with our tools if you are also satisfied with them. We want to provide top products that are totally convincing, through great performance and a definite improvement in handling comfort. Our customers have trusted us to offer this for over 60 years.

You will be convinced of our product quality when you use them. We guarantee the quality and productivity of all our products.

Convince yourself — it works that way:

When you purchase a tool from Rhodius, you will have 60 days to test the product and its performance. If you should not be satisfied with the tool's quality or performance, your specialist retailer will replace it, or you can have your money back.

This service is provided by selected specialist retailers. The full guarantee terms are available from participating specialist retailers and on the Internet at www.rhodius-abrasives.com

Your advantages:

- correct choice of product
- guaranteed product performance
- easy exchange
- simple money-back ruling

= 100 % satisfaction

Look for this seal of quality.
It identifies specialist retailers
offering the Rhodius satisfaction
guarantee.

BRAINTOOLS® simply clever problem solvers

Intelligent tools for special tasks. Tools in the BRAINTOOLS range possess unique application benefits that turn them into individual problem-solvers. BRAINTOOLS are the unbeatable added-value solutions. In your daily work they deliver such specific benefits as: time savings, comfort of application, reduction of material waste and handling: **maximum efficiency for maximum cost-effectiveness.**

XT8 EXACT

For precision cutting.

Factors for selecting the optimum cutting disc

The maximum efficiency can only be achieved if a cutting disc perfectly matches your machine and application. We have summarised what you should look out for when choosing a product and how cutting discs differ.

Extra-thin cutting discs

Our extra-thin cutting discs bear the product code XT. With a maximum width of disc of only 1.9 mm, they are the ideal tool for processing thin-walled materials as well as solid material. Extra-thin cutting discs cut much easier thanks to the lower friction at the workpiece. This minimises the thermal load and greatly reduces blueing of the workpiece. Its almost burr-free cut also minimises time-consuming reworking.

Sturdy cutting discs

Cutting discs with a width of disc greater than 1.9 mm are identified by the code FT within the product name. Thanks to their kind of fabric reinforcement and the associated high stability, they are suitable for tough jobs such as the freehand cutting of structural and tool steel. Use our cutting discs with the code ST for stationary cutting.

The right combination of tool and machine

Very efficient discs need strong drive machines to achieve the optimum performance of the cutting disc.

Determine the performance of your machine and select a matching cutting disc.

		Powerful machines range from:					
		Disc Diameter	Ø 100	Ø 115	Ø 125	Ø 180	Ø 230
Machine type	Compressed-air	>450 W	> 650 W	> 850 W	>1,600 W	>1,900 W	
	Electrical	>550 W	>1,000 W	>1,200 W	>2,000 W	>2,200 W	

For low-powered machines

Select a softer disc.

The softer bond releases new abrasive grit more easily.

> soft discs are characterised by a high cutting ability.

Weaker machines do not provide enough power for hard discs to release new abrasive grit.

Consequence: The cutting ability deteriorates and the disc becomes blunt.

For powerful machines

Select a hard disc from the Rhodius quality lines BRAINTOOLS, TOPline or PROline.

> very long lifetime and cutting ability on efficient machines.

Soft discs on efficient machines lead to a fast disintegration of the bond.

Consequence: The disc's lifetime is shortened significantly.

This way cutting discs achieve performance

- 1 Metal ring with expiry date**
centred and secure fixing in the machine
- 2 Paper label**
all product and safety information on every disc
- 3 Fibreglass fabric**
strong high-quality fabric for greater safety during cutting
- 5 Fibreglass fabric**
second fabric for even greater safety and stability

- 4 Mix**
Abrasive grit
The corresponding grain or an optimum mix of different grain types needs to be selected depending on which materials are being cut.
- Grinding-active filling materials**
Besides high-quality types of grain, Rhodius cutting discs also contain substances that actively optimise your cutting work.
- Bond**
How the abrasive grit is bonded and how it is adapted optimally to the application, constitute significant factors in achieving a high cost-effectiveness.

Better orientation through a new product system

●●●●●○ **Lifetime**
The lifetime indicates the maximum number of cuts for a disc.

●●●●●○ **Cutting ability solid material**
●●●●●○ **Cutting ability thin-walled material**
The cutting ability indicates the maximum cutting speed for a solid material and a thin-walled material.

Further application tips for our cutting discs can be found at www.sharpg grinding.com

Maximum precision when cutting

WEB-VIDEO online:
www.sharpgrinding.com

Noticeable advantages for the user:

- Precise cut
- Less physical effort
- Cool cut minimises tarnish colour and material distortion
- No lacquer discolourations

BRAINTOOLS® XT8 EXACT

mm:
0,8

XT8
EXACT

BRAINTOOLS®

- Lifetime
- Cutting ability solid material
- Cutting ability thin-walled material

The XT8 EXACT demonstrates and convinces through outstandingly smooth running, resulting in optimum handling. Its exceptional precise, clean and almost burr-free cut reduces reworking to almost zero. Even extremely hard materials such as spring steels, stainless steel sheets etc., are easily cut by the 0.8 mm thin disc. Much harder and stronger than conventional cutting discs, its narrow cut also means that hardly any contact pressure is needed, making for noticeably easier work.

Cutting

i Especially for low power machines and battery-powered angle grinders

- Material:**
- Rust and acid-proofed steels
 - High-alloyed steels
 - High tensile steels
 - High tensile metal sheets
 - Plastic laminated metal sheets
 - Varnished metal sheets

- Application examples:**
- Thin-walled sheets
 - Thin-walled tubes
 - Thin-walled profiles
 - Cable ducts
 - Corrugated sheets
 - Trapezoidal profiles
 - Thread rods

XT8 EXACT A60U9BF1433

40 x 0.8 x 6.00	50 207058
50 x 0.8 x 6.00	50 207060
65 x 0.8 x 6.00	50 207067

see page 34 for fitting mandrels

XT8 EXACT A60U9BF1433

Shape 42	
115 x 0.8 x 22.23	50 206683
125 x 0.8 x 22.23	50 206684

Burr-free cutting of thread rods

Ideal for secure repairs with I-seams

The XT8 revolutionises MIG-welding

- 0.8 mm thin cut
- reduced heat development
- low grinding volume
- optimal width of the solder gap with I-seams

Safe cutting and grinding in one operation

WEB-VIDEO online:
www.sharpgrinding.com

Noticeable advantages for the user:

- Extra-thin and precise cutting and rough grinding with one disc
- Cutting-burr removing-chamfering-dressing with one disc
- No change of disc
- Extremely safe through three full-surface fabric layers

BRAINTOOLS® XT35 CROSS

mm:
1,9

XT35
CROSS

BRAINTOOLS®

- Lifetime
- Cutting ability solid material
- Cutting ability thin-walled material

The XT35 CROSS for the first time allows the combination of cutting and grinding work in one operation and is only 1.9 mm thick! Its 3 full-surface fabric layers ensure a strong reinforcement and extremely high side stability. By simply changing the angle of application, grinding work such as burr removing, chamfering and dressing can be carried out directly after cutting without changing the machine or disc.

Cutting

Material:

- Rust and acid-proofed steels
- Hardened steels, high-alloyed steels
- Tool steels
- Structural steels
- Galvanised parts
- Varnished metal sheets
- High tensile metal sheets
- Hardox

Application examples:

- Cutting
- Beveling
- Burr removing
- Dressing
- Solid materials
- Thin metal sheets, tubes and profiles
- Plastic laminated metal sheets
- Structural steel sheets, concrete reinforcing iron
- Folded spiral seam tube

Extra-thin cutting and grinding with one disc

Extra-thin cutting discs

Extra-thin cutting discs have a smaller friction surface. This allows a fast and cool cut.

This avoids blueing of the workpiece. Cutting with fewer burrs also saves the user any tiresome reworking.

The chapter on 'Extra-thin cutting discs' contains an outline of all cutting discs up to a maximum width of disc of 1.9 mm.

Product Advantages:

- Low development of burrs
- Few sparks
- High cutting speed
- Long lifetime
- Cool cut
- Low odour

Select the depressed shape for more stability during the cutting process

Extra-thin cuttings discs / stainless steel

Material:

- Rust and acid-proofed steels
- High tensile / high-alloyed steels
- Hardened steels
- Hardox
- High tensile metal sheets
- Plastic laminated metal sheets

Iron and sulphur-free

i All cutting discs for stainless steel are iron and sulphur free. Do NOT switch between normal and stainless steel when processing workpieces.

Extra-thin cutting discs / non-ferrous metals

Material:

- Non-ferrous metals
- Bronze
- Brass
- Bearing metal
- Al-alloy

Special filling materials prevent clogging of the disc

i Aluminium dust is very fine and can accumulate in angle grinders and destroy these during grinding despite an extraction system. Portable air grinders are dust-insensitive. If you are cutting aluminium with an electric angle grinder you can halve the dust development with a thin aluminium-cutting disc. Clean the angle grinder after work with compressed air. A good dust extraction system is a must in closed rooms since high concentrations of aluminium dust can lead to explosions.

Freehand cutting discs

Freehand cutting discs are generally used for rugged applications. Through a stronger fabric and their disc width of up to 4 mm, they offer a higher side stability and a safer feeling when cutting solid materials.

You can now get a number of Rhodius freehand cutting discs which are only 2 mm wide. This achieves a faster and cooler cut.

Product Advantages:

- High cutting speed
- Long lifetime
- Efficient
- Comfortable cutting behaviour
- Easy cutting

All freehand cutting discs for petrol-driven cutting machines have a special strong reinforcement for high lateral stresses

Freehand cutting discs / stainless steel

Material:

- Rust and acid-proofed steels
- High tensile / high-alloyed steels
- Tool steels
- Hardened steels
- Hardox

Stationary cutting discs

Stationary cutting discs for stationary cutters and cut-off saws are characterised by a long life and high cutting ability.

Product Advantages:

- High cutting speed
- Long lifetime
- Comfortable cutting behaviour
- Easy cutting
- Efficient

Pay attention to the speeds as shown on the label. These tell you which machines the disc can be used on.

Stationary cutting discs / stainless steel

Material:

- Rust and acid-proofed steels
- High tensile / high-alloyed steels
- Tool steels
- Hardened steels
- Hardox
- High tensile metal sheets

Iron and sulphur-free

Please note that stationary cutting discs are NOT suitable for freehand cutting

ST38

TOP LINE ●●●

- Lifetime
- Cutting ability solid material
- Cutting ability thin-walled material

The ST38 was especially developed for chop saws for the cutting of stainless steel. The high percentage of zirconium contained renders the ST38 significantly more efficient than typical cutting discs for stationary cutting machines.

Cutting

Diamond cutting discs

Efficiency due to maximum lifetime

Regardless if they have to work on natural stone, tiles or concrete – professional users expect clean cuts and a long lifetime from a diamond cutting disc. There are three main factors which decide the way in which a diamond cutting disc behaves during use: the quality of the diamonds, the bond strength of the segments and the shape of the cutting edge. We will explain the decisive factors in the manufacture of diamond cutting discs on the following page.

Solutions for any type of application

There is no universal diamond cutting disc you can use for every kind of application. The material to be processed is decisive for the choice of the optimum tool. More than 25 years' of experience have gone into our diamond tools. This means that we can offer you brilliant solutions for all common materials and applications.

Cutting

The diamond – extremely hard and easy-cutting

High-grade, industrially manufactured diamonds ensure the constant high quality of our diamond tools. They are made from graphite under extreme pressure at high temperatures. This means that unlike natural diamonds, their properties can be reproduced at any time.

The following quality features are very important when using diamond tools:

- Purity
- Defined ultimate strength
- Sharp edges
- Constant geometry

The binding segment

The diamonds in a diamond cutting disc are integrated in the segment in a metal bond. The composition of the metal powder is chosen depending on the cutting disc's field of use. If abrasive building materials are to be cut, a hard segment bond is chosen. If the cutting disc is for hard materials, a soft bond is the right choice. The various properties of the metal bond thus affect the cutting ability and segment wear.

Your path to the right product

The material decides which diamond tool is the right one for your individual application case. Simply consult the relevant application matrix (e.g. concrete) in the corresponding product chapter and select a product in the quality of your choice.

The cutting edge types

The shape of the cutting edge is also of decisive importance for the stock removal performance of the diamond cutting disc and the impression of the cut during use. Generally, we differentiate between three cutting edge types:

Maximum performance through segment height up to 17.0 mm

Diamond cutting disc with segmented cutting edge

mm: 7,0-17,0

mm: 7,0

mm: 7,0

Short cutting times

Diamond cutting disc with turbo cutting edge

Clean cutting edges

Diamond cutting disc with closed cutting edge

Easy milling in one operation

WEB-VIDEO online:
www.sharpgrinding.com

Noticeable advantages for the user:

- Makes work much easier since no knocking out of the middle ridge is required
- Up to 50% time saving thanks to milling in one operation
- Reduces dirt and dust
- Accurately fitting slots for single leads \varnothing 12 mm or for \varnothing 20 and 25 mm ductwork

BRAINTOOLS® ALL IN ONE

LD402/LD403 ALL IN ONE

BRAINTOOLS®

- ● ● ● ● Lifetime
- ● ● ● ● Cutting ability

The ALL IN ONE allows the fast and comfortable milling of wall slots in a variety of stone materials (including reinforced ones). Thanks to the clever system of staggered segments, you can now, for the first time, mill accurately-sized wall slots and remove all the material cleanly from the slot. No more troublesome knocking out of the middle ridge. The efficient, laser-welded ALL IN ONE disc system mills aggressively and has a long lifetime.

Material:

- Limestones
- Aerated concrete
- Pumice
- Concrete products
- Concrete
- Reinforced concrete
- Fireclay bricks

Application examples:

- Easy milling of wall slots in only one operation

LD402 ALL IN ONE

125 x 7.0 x 18.0 x 22.23	1 303670
150 x 7.0 x 18.0 x 22.23	1 303671

LD403 ALL IN ONE

125 x 7.0 x 28.5 x 22.23	1 303621
150 x 7.0 x 28.5 x 22.23	1 303622

You can find our recommendation for suitable wall chasing machines at www.sharpgrounding.com/braintools
Minimum performance requirement:
Ø125mm - 1,800 W / Ø 150 mm - 2,200 W
Not suitable for the use on angle grinders

WALL SLOT CLIPS

OMEGA type A (LD402)	100 303673
OMEGA type B (LD403)	100 303625

Just directly order together with the main product

18 mm

28.5 mm

Fast assembly through firmly joined disc system.
Double-system for 20 mm slot width.
Triple-system for 30 mm slot width.

Staggered diamond segments enable milling with no ridge. This also prevents any clogging of the disc.

OMEGA wall slot clip type A ideal for Ø 12 mm single cables.
OMEGA wall slot clip type B ideal for Ø 20 mm and 25 mm ductwork.

Highest cutting speed in hard materials

WEB-VIDEO online:
www.sharpgrinding.com

Noticeable advantages for the user:

- Extremely high cutting speed
- Very long lifetime
- High safety, thanks to high side load values
- Less vibration while cutting
- Wide range of applications, thanks to a broad choice of materials

BRAINTOOLS® LD410 SPEED

mm: **13,0-17,0**

LD410
SPEED

BRAINTOOLS®

●●●●● Lifetime
●●●●● Cutting ability

The LD410 SPEED cuts even the hardest natural stone, such as granite, cleanly and extremely fast. The outstanding cutting ability has been made possible by a new manufacturing process for forged segments with a high-density and pore-free bond. The LD410 SPEED has a very high cutting speed and long lifetime compared to conventionally sintered diamond disc segments. The better welding properties of the segments and the resulting firm bond with the steel core ensure greater safety against segment breakage.

Cutting

Material:

- Hard natural stone (e.g. granite)
- Reinforced concrete
- Washed-out concrete
- Building materials / Bricks / Fireclay

Application examples:

- Road kerb
- Pumice stone
- Structural plaster
- Wall openings
- Cutting of floor slabs
- Window sills
- Stairs

LD410 SPEED

SPEED

BRAINTOOLS®

●●●●● Lifetime
●●●●● Cutting ability

The forged diamond segments of the LD200 SPEED allow higher performances at a high cutting speed and long lifetime compared to conventionally sintered segments. Under high pressure, forging produces high-density and pore-free segments. The LD200 SPEED combines outstanding cutting ability with a long lifetime for a wide range of materials, from reinforced concrete to abrasive materials. Better weld properties of the segments lead to a stronger bond with the steel core and thus greater safety against breakage.

Designation of abrasive discs

Designation of abrasive discs according to EN 12413:

On abrasive discs the type of grit, grit size, hardness, structure, bonding and code are indicated.

A 24 U 9 BF 1337

Abrasive grit

A = Standard aluminium-oxide
Z = Zirconium
C = Silicon carbide

For graduations within the individual grit qualities, numbers may be added in front of the letter for the abrasive grit, e. g.:

30A = Semi-friable aluminium oxide
54A = Pink aluminium oxide
56A = White aluminium oxide
89A = Special aluminium oxide

Grit size

Grit size in MESH acc. to FEPA standards:

04 to **24** = rough
30 to **60** = medium
70 to **220** = fine

Degree of hardness

The hardness is specified with the letters **A** to **Z**. It increases from **A** to **Z**.

Key

The Key contains operational information.

Type of bonding

B = Synthetic resin bonding
BF = Synthetic resin bonding with fibre reinforced

Structure

The structure is identified by the numbers **0** to **14**. The higher the number, the more open the structure, and the more porous the abrasive disc.

The material reference and safety designation

InOX/Stainless Steel

Steel

Non-woven cleaning tools

Material:

- High tensile steels
- Structural steels
- Tool steels
- Non-ferrous metals
- Primer, GFK
- Wood

The cleaning nylon discs are made of a coarsely structured, hard nylon. The nylon structure adapts to the contours of the workpiece to ensure thorough cleaning. There is no geometric change to the surface since only foreign materials such as rust and discolourations are removed. No residues are left on the workpiece.

i Only for use on adjustable angle grinders. The nylon melts at excessively high speeds. The optimum speed range is between 3,000 and 7,000 rpm.

Technical brushes

Brush types and applications

Wheel brushes

Processing solid or hollow rods, profiles, welding seams, cut edges, toothed wheels, grooves, narrow surfaces.

- Roughing
- Burr removing
- Edge breaking
- Matt finishing
- Structuring
- De-rusting
- Cleaning
- Polishing
- Slag removal

Cup brushes

Efficient processing of large areas, welding seams, metal plates.

- Cleaning
- Burr removing
- Slag removal
- De-rusting
- Lacquer removal

Flap wheel brushes

The lightweight design means that the brushes can be easily driven with a drill.

- Roughing
- De-rusting
- Cleaning
- Matt finishing
- Structuring

End brushes

Precision processing of inaccessible points and inside surfaces.

- Cleaning
- De-rusting
- Burr removing
- Slag removal

Bevel brushes

Ideal tool for processing corners, edges or inaccessible points as well as surface cleaning. Combines the advantages of cup and wheel brushes.

- Cleaning
- Roughing

Hand scratch brushes

For manual universal use.

- Roughing
- Cleaning
- De-rusting

Fill materials

Matching the material and the brush

Quality steel wire crimped

- Most commonly used fill material
- For flexible brush tools
- Application: light surface treatment, deburring work

Quality steel wire smooth / crimped

- High brush requirements
- For brush tools with a low flexibility
- Application: processing weld seams and removing heavy deposits of scale or corrosion

Brass wire

- Surface finish of non-ferrous metals (NF-metals)

Abrasive grinding bristles Aluminium oxide or Silicon carbide

- Nylon bristles impregnated with abrasive grit
- Easy deburring of steel, NF-metal and hard plastics
- Uniform abrasive action through abrasive release when worn
- High elasticity and flexibility with no risk of breakage

Technical Information

Working speed & maximum safe free speeds

Surface speeds in metres per sec.

On each tool you can find the maximum safety turning speed. This speed is important to ensure your safety at work and must not be exceeded. Using angle grinders with an adjustable turning speed allows you to adjust their turning speed to the maximum allowed.

Standard values:

for crimped wire 30 - 35 m/sec
for nylon bristle 18 - 22 m/sec

Recommended brush diameters for angle grinders

		Brush diameter (in mm)											
Ø	Machine outside diameter	60	65	75	80	90	100	115	120	125	150	175	
Wheel brush, knotted								115	115		125	150	180
Wheel brush, crimped								115	115				
Cup brush, knotted				115	125	150		180					
Cup brush, crimped			115		125	150		180					
Cup brush, abrasive								adjustable 150					

Working speed for Ø:

■ Ø 115 mm (4 1/2") 12.500 U/min⁻¹

■ Ø 125 mm (5") 11.000 U/min⁻¹

■ Ø 150 mm (6") 8.500 U/min⁻¹

■ Ø 180 mm (7") 8.500 U/min⁻¹

■ Ø 230 mm (9") 6.500 U/min⁻¹

Selecting the appropriate Rhodius brush

Brush diameter and trim length of fill material

The brush diameter and length of fill material are the determining factors for the surface working result. A combination of smaller diameter brush body and greater length of fill material results in soft and flexible brushes which are ideally suitable for the treatment of structured workpieces and for easy, gentle surface working.

A larger diameter of the brush body and smaller length of fill material result in more aggressive brushes which can be used for deburring and removal of tougher dirt.

For the most efficient surface working, please select the maximum brush diameter, which can be mounted on the respective driving device. The peripheral speed and consequently the performance of the brush can be influenced by the brush diameter.

Important: Portable machines must only be used with brushes with maximum 180 mm diameter!

Fill material density of the brush

The fill material density depends on the number of wire tips per surface unit.

High fill material densities are the basis for achieving optimal performance and lifetime of the brushes as well as perfect results, e.g. during deburring. Low fill material densities increase the flexibility of the brush and are ideal for the treatment of strongly profiled surfaces. If the brush diameter stays the same, the fill material density can be influenced by the measure of the body.

Working- and clamping width of the brush

The working width describes the contact surface of the brush on the workpiece. The rotational speed of the brush during operation may influence the indicated maximum working width.

Wheel brushes / stainless steel

Material:

- Rust and acid-proofed steels
- High tensile / high-alloyed steels
- Structural steels
- Tool steels
- Hardened steels
- High tensile metal sheets

Processing solid or hollow rods, profiles, welding seams, cut edges, toothed wheels, grooves, narrow surfaces.

Fillet weld grinding with maximum lifetime

WEB-VIDEO online:
www.sharpgrinding.com

Noticeable advantages for the user:

- Processing narrow slits and corners
- Flat grinding angle for precise grinding of fillet welds
- Efficient through complete use when grinding fillet welds
- Choice of grain size 40/60/80

BRAINTOOLS® FS1 FUSION

40/60/
80

FS1
FUSION

BRAINTOOLS®

●●●○○○ Lifetime
●●●●●● Stock removal
●●●○○○ Hardness

The FS1 FUSION combines the long life of a grinding disc with the fine grinding pattern of a flap disc. It works with high finish in fillet welds so that the workpiece can be galvanised or lacquered immediately afterwards. It is available in various grits - doing away with additional fine grinding. Its clean cut with high stock removal ensures an outstanding stock removal performance. The FS1 FUSION can be profiled in the edge area to allow individual processing for almost every case.

Material:

- Rust and acid-protected steels
- High tensile / high-alloyed steels
- Hardened steels
- Structural steels
- Tool steels
- Grey cast iron
- Hardox

Application examples:

- Fillet weld treatment
- Edge grinding
- Surface grinding
- Levelling
- Burr removing
- Welding seams
- Weld seam preparation
- Forge grinding

The hardness of a grinding disc determines the lifetime as well as its stock removal and stock-removing efficiency.

A soft grinding disc is much more aggressive and offers a comfortable grinding behaviour.

A hard grinding disc is characterised by its long lifetime. We recommend hard grinding discs for edge grinding. Soft grinding discs can be used for surface grinding.

Rhodium grinding discs are made in a thickness of 7 mm and with a special top layer. Grinding discs, unlike flap discs, are characterised by their high stock removal and cutting efficiency as well as lifetime.

Common fields of application for grinding discs are:

- Weld seam preparation
- Burr removing
- Levelling
- Corner and edge grinding
- Levelling of welding seams

We recommend the use of flap discs for more comfortable surface grinding. You will find these from page 120 onwards.

Advantages of the special top layer:

- Almost no edge cracks
- Circular, low-vibration running
- Uniform wear

Cup wheels, resin-bonded

Cup wheels are ideal for surface grinding. Both coarse and fine grinding can be carried out thanks to the grading of the grain from 16-60.

Application examples:

- Levelling of concrete and screed surfaces
- Roughening of surfaces

Pay attention to the maximum working speed of 50 m/s

Cup wheels & grinding wheels / steel

Material:

- High tensile / high-alloyed steels
- Structural steels
- Tool steels
- Hardened steels
- Hardox

i The SR15 grinding wheel is ideal for end grinding on compressed-air and electrically-powered straight grinders.

Fine Grinding / Finishing

Fine Grinding / Finishing

Coated abrasives

Performance factors for perfect results

Whether belts, discs or rollers – four factors determine the optimum composition for coated abrasives. Explained below are the individual components: backing type, bond, dispersion and grain so that you know what to look out for when choosing the right tool.

The backing type is key

You have to choose a flexible or sturdy base depending on how the abrasive is to be used. Paper and cotton fabric are used as flexible carrier materials for manual grinding. Polyester and vulcanised fibre, a combination of fabric and polyester, serve as a sturdy and tear-proof base for heavy-duty applications in industry.

The bond determines the result

The key to a good bond lies in the balance between grain fixation and flexibility. Rigid and aggressive as well as highly flexible abrasives for fine grinding can be produced with the help of the bond. The basic binder is used for the initial fixation of the abrasive grains. An additional top binder ensures the necessary bond between the abrasive grains themselves. Softer or harder binders are employed depending on the field of use. An additional active grinding substance is applied with certain bases to ensure cooler grinding.

The right dispersion for every material

With a closed dispersion, the abrasive grains are distributed on the surface with very small gaps. This results in a higher stock removal performance and a lower roughness since more grain tips are in action. If the abrasive grains are distributed with a defined gap one speaks of an open dispersion. This type of dispersion prevents clogging and is mainly used for aluminium, soft woods, paints and varnishes.

The grain works for you

The following raw materials are used as abrasive grit:

	Standard aluminium-oxide	Silicon carbide	Zirconium
Shape	Cubic, angular	Conical, sharp-edged	Sharp-edged
Hardness (Mohs)	9.0	9.6	6.5 – 7.5 (very tough)
Application	<ul style="list-style-type: none"> Leather Wood Filler Stainless steel Aluminium 	<ul style="list-style-type: none"> Flake board Varnishes Stone Plastic Glass 	<ul style="list-style-type: none"> Stainless steel Steel Aluminium
Grit			

Stainless steel polishing

Simply polish to achieve a mirror finish

Polishing tools are used to produce high-gloss surfaces as well as for maintenance and/or restoration in order to achieve an optimum surface quality.

In the superfinish fields of Polishing, tools are used to produce high-gloss surfaces as well as for maintenance and/or restoration in order to achieve an optimum surface quality. In particular in the food/pharmaceutical industry, a smooth surface guarantees satisfaction of the highest hygiene requirements since deposits and dirt cannot cling to this.

What's more, a high-gloss polished surface prolongs the life of the material.

How to achieve brilliant pre-conditions

The prepared workpiece must not show any deep scratches or inclusions. In order to achieve an optimum working result, the surface should finally be processed with grinding tools that have a grain of 60 or even smaller. (We recommend LSZ F VISION).

Fine Grinding / Finishing

Perfect results in three steps

1 **Preparation**
 – free the surface from all scratches
Non-woven flap disc: VSK VISION
Optimum speed: 3,000 - 3,500 rpm
 The VSK VISION removes the total of the rough scratches on the workpiece. Your flexible non-woven disc adapts well to the surface creating a homogeneous surface. The open structure of the flaps reduces clogging to a minimum. Low development of heat prevents unwanted discolourations on the workpiece. In addition, you always have a free view of the workpiece and thus optimum control over the processing.

2 **Pre-polishing and finishing**
 – create an optimum surface finish
Unitised discs: VKSS/VKSG
Optimum speed: 3,600 - 4,000 rpm
 VKSS/VKSG allows an excellent surface finish, almost like a mirror finish. It can be profiled and perfectly adapts to the contours of the workpiece. Thanks to its sturdy design, VKSS/VKSG is suitable for constant use and prepares the surface perfectly for polishing.

3 **High-gloss polishing**
 – enhance your work pieces up to a mirror finish
Nylon flap discs with polishing pastes: FLS & PASTE
Optimum speed: 1,600 rpm
 FLS finishes the polishing process and enables a perfect mirror finish. Using various polishing pastes you can process a wide variety of materials such as steel, stainless steel and non-ferrous metals. Highly-flexible flaps of wool felt adapt to the contours of the workpiece. The special design of the FLS ensures cool grinding during processing and prevents unwanted discolourations.

Note:

In general, we recommend adjustable angle grinders for step 1 – 3 in order to achieve optimum results.

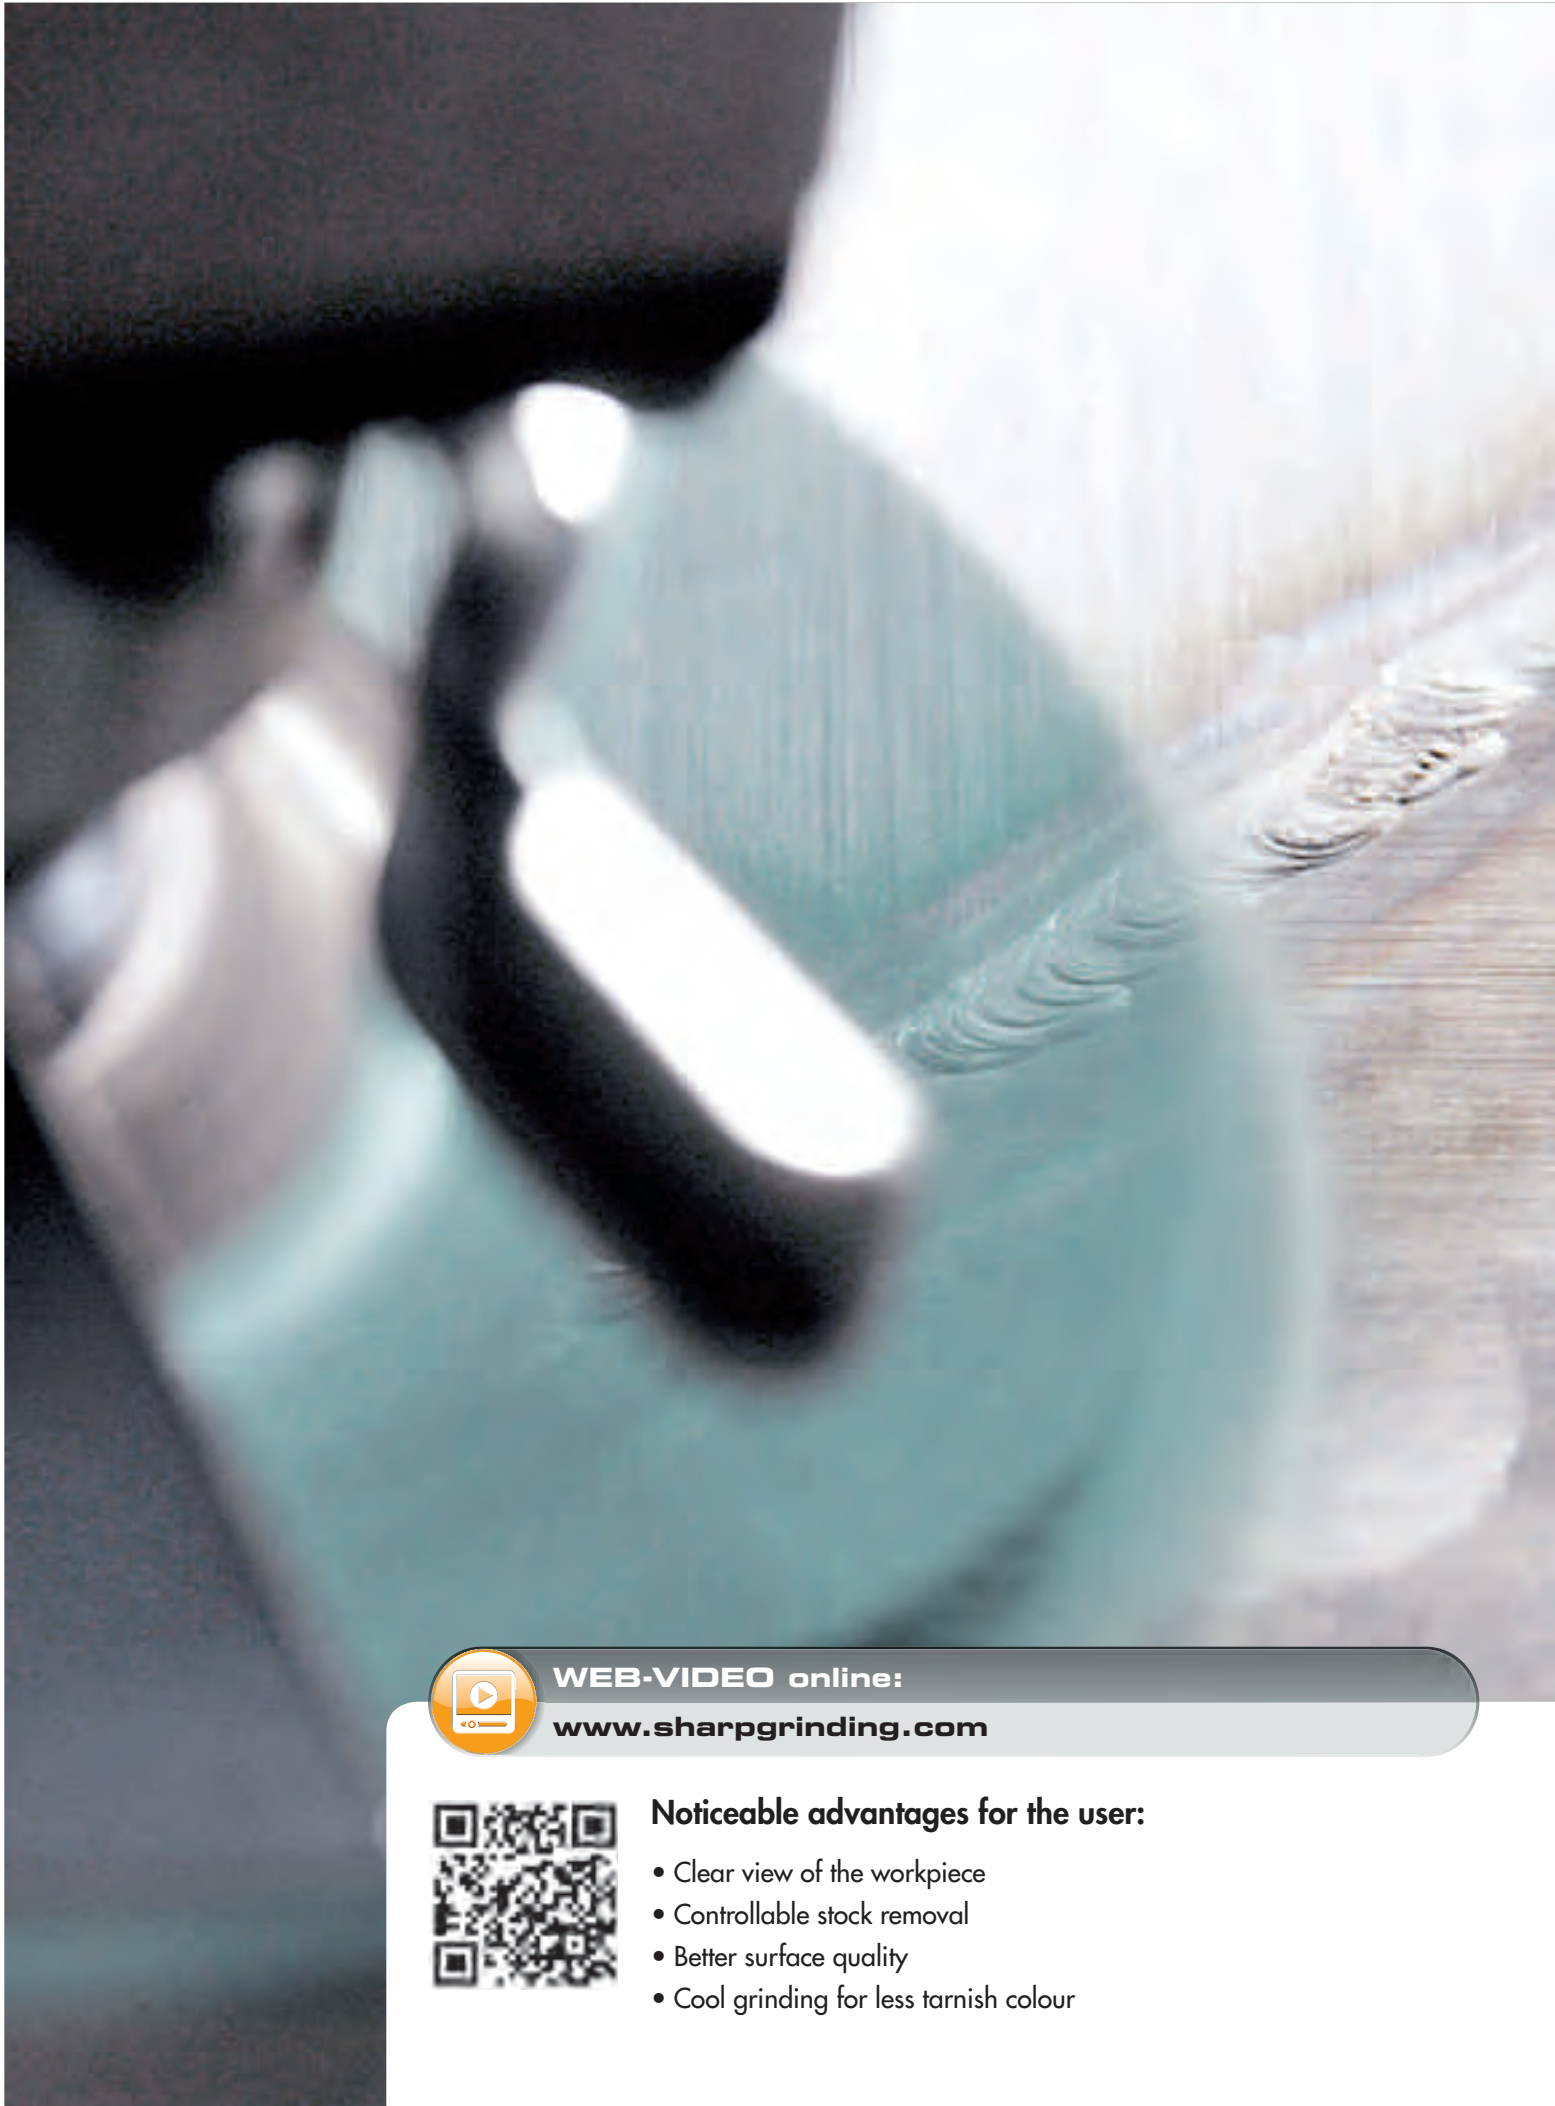

Choosing the right polishing paste

	1. Pre-polishing	2. High-gloss polishing
Stainless steel	Polishing paste, white	Polishing paste, blue
Non-ferrous metals	Polishing paste, brown	

Optical check when grinding

www.sharpgrinding.com

Noticeable advantages for the user:

- Clear view of the workpiece
- Controllable stock removal
- Better surface quality
- Cool grinding for less tarnish colour

BRAINTOOLS® LSZ F VISION

40/60/
80

LSZ F
VISION

BRAINTOOLS®

●●●●○ Lifetime
●●●●● Stock removal

Thanks to its recesses the LSZ F VISION becomes transparent during rotation (cf. Fig. below and left). This guarantees a free view of the workpiece, the user sees how much and where he is grinding. This allows a permanent check of the results without putting the machine down: the stock removal can thus be selectively controlled to reduce costly processing errors. This also cuts processing time and increases efficiency. But it also means less stress and a lower physical load combined with a very high efficiency. Fibre support, zirconium.

Material:

- Rust and acid-proofed steels
- Hardox
- High tensile metal sheets
- Structural steels
- Tool steels
- Non-ferrous metals
- Wood, varnish, filler
- Plastics
- GFK

Application examples:

- Galvanised parts
- Welding seams
- Burr removing
- Levelling
- De-rusting
- Surface grinding
- Edge grinding
- Cleaning

- Better surface quality
- Cool grinding for less tarnish colour

BRAINTOOLS® VSK VISION

VSK
VISION

BRAINTOOLS®

- Lifetime
- Stock removal

Thanks to the unique combination of two special product features, the VSK VISION offers some clear advantages for the surface finishing of stainless steel. On one hand, it combines alternating abrasive cloth and non-woven discs in alternating layers on one disc. This enables a decorative surface finishing (due to the nylon abrasive discs) with the removal of material (abrasive cloth) in one step – saving users one operation. On the other hand, its sectional structure allows plain vision at the piece to treat, during work. Hence, this allows a permanent optical check with a simultaneous cooling effect.

i Optimum speed: 3,000 - 3,500 rpm

Material:

- Rust and acid-proofed steels
- High tensile / high-alloyed steels
- Structural steels
- Tool steels
- Non-ferrous metals
- Wood, varnish, filler
- Plastics
- GFK
- Carbon fibre reinforced plastic

Application examples:

- Preparation for polishing
- Decorative surface finishing
- Welding seams
- Burr removing
- Levelling
- De-rusting
- Surface grinding
- Edge grinding
- Cleaning

125 x 22.23	80	10	208748	

JUMBO flap discs

Simply grind more efficiently

Some of the river cruise ships of Neptun's shipyards in Rostock are more than 130 m long. This means that there is a lot to cut and grind while building the ship's rump. The flaps on the **JUMBO LONGLIFE** and **JUMBO SPEED** are also very long. Their long flaps increase the efficiency in professional use.

Copyright: Neptun shipyard

Precise measurements were taken in a fatigue test performed at Neptun's shipyards. After 56 minutes of continuous operation and 2,036 grammes of stock removal, the **JUMBO LONGLIFE** was finally completely worn out. That's 500 grams or 30% more stock removal than a comparative tool managed to perform.

As you would expect, the Neptun shipyard's review was very positive: "It's not the price of the tool that decides the project costs. The working hours are much more important. If we can achieve noticeable optimisations through modern abrasives, we will be saving a lot of money at the end of the day."

"In my opinion, the JUMBO LONGLIFE is the best flap disc for ship-building" That is how the head of the test project comments on the results.

JUMBO LONGLIFE conventional flap disc

Conventional flap*: JUMBO flap*:

* indications valid for cutting discs with a diameter of 125 mm

JUMBO SPEED

Faster and more efficient due to extremely high stock removal performance

The larger supporting surface of the flaps permits very aggressive grinding with a much higher stock removal efficiency. The new **JUMBO SPEED** grinds much faster than conventional flap discs thanks to its extremely fast stock removal. This makes it ideal for efficient stock removal.

Conventional flap*: JUMBO flap*:

* indications valid for cutting discs with a diameter of 125 mm

JUMBO LONGLIFE

Longer life and more efficient thanks to much more abrasive material

The higher segmentation and longer flaps mean much more abrasive grinding material on the support – this ensures a higher abrasion power and an up to 30% longer lifetime (compared to LSZ F TOPline). The **JUMBO LONGLIFE** achieves an outstanding efficiency compared to conventional flap discs. It is particularly suitable for edge grinding and is the specialist for all types of grinding at a steep angle.

Non-woven flap disc

Material:

- Rust and acid-proofed steels
- High tensile / high-alloyed steels
- Hardened steels
- High tensile metal sheets
- Non-ferrous metals
- Varnished metal sheets

The fine and flexible nylon fibres make for a good surface finish.

Use adjustable angle polishers and a greatly reduced speed for optimum results and to prevent any melting of the nylon.

Fibre discs

Material:

- Rust and acid-proofed steels
- High tensile / high-alloyed steels
- Structural steels
- Tool steels
- Hardened steels
- High tensile metal sheets

Fibre discs are used together with the RHST and RH TURBO supporting plate on angle grinders. They are suitable for universal use from coarse to fine grinding.

i Zirconium and ceramic fibre discs achieve their best performance on powerful angle grinders with a higher contact pressure. Ceramic fibre discs are ideal for processing titanium.

24-80

KFK

TOPLINE ●●●

Backing type: Vulcanised fibre
 Type of abrasive used: Ceramic
 Bond: Synthetic resin

Ceramic grains are especially advantageous when treating hardened and tempered steel, tinner areas and titanium.

Abrasive belts

The right grinding belt for your machine

In the following outline, you will find our recommendations of appropriate machines for the different belt sizes. Please feel free to contact us if the machine you are using is not listed.

We will be pleased to be of assistance.

Abrasive belt dimensions (mm)	Machine manufacturer	Machine type

Abrasive belts

Material:

- Rust and acid-proofed steels
- High tensile / high-alloyed steels
- Tool steels
- Hardened steels
- High tensile metal sheets
- Wood

Abrasive belts are ideal for edge grinding or for use on a tube belt grinder to process round workpieces since they adapt to the workpiece's shape.

Quick change discs

Material:

- Rust and acid-proofed steels
- High tensile / high-alloyed steels
- Hardened steels
- High tensile metal sheets
- Non-ferrous metals

The quick change system allows a fast and easy tool change. Without sticking. Without slipping.

i Quick-change discs are mainly used in confined and inaccessible points, e.g. for automobile repairs and maintenance.

Fan grinder

Material:

- High tensile / high-alloyed steels
- Structural steels
- Tool steels
- Hardened steels
- Hardox
- High tensile metal sheets

The uniform arrangement of the flaps guarantees a constant wear. The high flexibility, above all with the slotted designs, permits a good adaptation to the material standards. What's more, the ventilation for the individual flaps ensures cool grinding.

 Shaft mounted flap wheels are ideal for fine deburring work and preparatory work at inaccessible points.

Non-woven fan grinder

Material:

- Rust and acid-proofed steels
- High tensile / high-alloyed steels
- Structural steels
- Tool steels
- High tensile metal sheets
- Non-ferrous metals

Combination shaft mounted flap wheels of cloth and nylon as well as nylon flap wheels give the workpiece a good surface finish, particularly at inaccessible points.

Prepare the workpiece for polishing in only one operation with the combination shaft mounted flap wheels.

Satin finish rings

Your equipment for satin finishing and polishing

Application:

- Lacquer removal
- Matt finishing
- Processing of surfaces
- De-scaling
- Deoxidise

Material:

- Rust and acid-proofed steels
- Steel
- Non-ferrous metals
- Plastics
- Varnished metal sheets

High-grade, satin finish rings from Rhodius are made of a nylon fleece with abrasive grit in three different grains.

A perfect mirror finish and elegant satin finish surfaces requires patience, experience and the right tool. The following pages explain how you can select the right satin finish or polishing ring for drills or angle grinders and achieve the results you want.

 coarse	SAT coarse Aluminium oxide, coarse	
 medium	SAT medium Aluminium oxide, medium	
 fine	SAT fine Silicon carbide, fine	

Polishing rings

In order to obtain best results, we recommend polishing in 3 steps. The recommended tools for grinding work before polishing can be found on page 121. The matching polishing pastes can be found on page 161.

Advantages:

- High-quality randomly oriented fibre
- No interfering seams
- Low temperature development
- Homogeneous wear
- 30% less paste consumption compared to conventional cloth rings

Material:

- Rust and acid-proofed steels
- Steel
- Non-ferrous metals
- Varnishes
- Plastics
- Varnished metal sheets

Milling

Tungsten carbide burrs

Fine precision

Precision is the key performance criteria for carbide burrs. This is why Rhodius carbide burrs are manufactured on the most modern CNC machines. The outstanding accuracy of these machines guarantees the constant high quality of the tool. Our carbide burrs are characterised by a high concentricity and perfectly matched cutting geometry, type of cut and number of cuts. For spot-on working results.

The right cut

The following basic rule applies: the harder the material to be processed, the finer the cut.

	Cut	Type of cut	Preferred application	Recommended working speed [m/min]	
	Z6	Double cut	for a high stock removal with steel, cast iron and stainless steel	unalloyed steels/cast steel	450-600
				alloyed steels, tool steels	250-350
				Rust- and acid-proofed steels	250-350
				cast iron	450-600
	Z3	Single cut	for a good surface finish with steel, cast iron and stainless steel	unalloyed steels/cast steel	450-600
				alloyed steels, tool steels	250-350
				Rust- and acid-proofed steels	250-350
				cast iron	450-600
	Z ALU	Aluminium cut	for a high stock removal with aluminium and soft aluminium alloys, light metals, non-ferrous metals and plastics	Non-ferrous metals	700-900

The recommended operating speed

In order to achieve optimum working results and long lifetimes, the choice of an optimum speed is also of decisive importance. If the speeds are too low, this leads to erratic running and cavities. The consequence is premature wear of the carbide burr. Knocking and chattering of the carbide burr also greatly reduces the lifetime. This is why you should only use true-running chucks.

Carbide burr ø (mm)	Recommended cutting speed [m/min]					
	250	350	450	600	700	900
	Operating speed [min ⁻¹]					
3	27,000	37,000	48,000	64,000	74,000	95,000
4	20,000	28,000	36,000	48,000	56,000	72,000
6	13,000	19,000	24,000	32,000	37,000	48,000
8	10,000	14,000	18,000	24,000	28,000	36,000
10	8,000	11,000	14,000	19,000	22,000	29,000
12	7,000	9,000	12,000	16,000	19,000	24,000
16	5,000	7,000	9,000	12,000	14,000	18,000

Tool Sets

TOOL SET **Stainless steel polishing**

PROFESSIONAL TOOL SET STAINLESS STEEL POLISHING

Our 'Professional Set' is just the thing for you if you have to frequently polish stainless steel. It comes with a selection of perfectly matched products for all stages of work – from grinding to mirror-finish polishing. This specific selection of products will enable you to quickly and simply get the end result you want. Because of the reduced speeds, all polishing products in the set must be used on angle grinders / angle polishers with a diameter of 125 mm.

i Clean the workpiece after every stage of polishing with a soft damp cloth and a little washing-up liquid. All paste residues from the previous stage of polishing must have been removed from the workpiece before mirror-finish / end-finish polishing may be commenced.

Content:

⊕	📄 🖨️
For angle grinders in diameter 125 mm	1 209540

VISION discs provide with three clever recesses an unobstructed view of the workpiece.

VSK VISION: With the combination of two grinding tools, you can grind and finish in one operation

Due to the felt flaps the FLS guarantees a perfect redistribution of the polishing paste

TOOL SET Aluminium rims polishing

PROFESSIONAL TOOL SET ALUMINIUM RIMS POLISHING

Aluminium rims will sparkle like new after a professional polish. The 'Professional Set' for polishing aluminium rims comes with all the tools you'll need. Use the angle-polisher products for the larger areas and the additional tools possessing a 6 mm shank for the finer tasks. The pastes have been specially formulated for aluminium.

i Clean the rim after every stage of polishing with a soft damp cloth and a little washing-up liquid. All paste residues from the previous stage of polishing must have been removed from the rim before mirror-finish polishing may be commenced.

VISION discs provide with three clever recesses an unobstructed view of the workpiece.

The non-woven fabric pressed in our VKS discs and shank tools can be profiled and thereby perfectly adapts to the geometry of the piece to be treated.

Optimum redistribution of the polishing pastes on the felt flap discs FLS and the polishing felt tools FLPB

TOOL SET **Automotive**

PROFESSIONAL TOOL SET AUTOMOTIVE

This 'Professional Set' provides the solution for many of the daily tasks encountered in automotive workshops. The XT8 Exact cuts thin-walled components almost without leaving any burrs. The included brushes make cleaning and removing paint from workpieces easier. The XT35 CROSS has been designed for cutting and light grinding work, such as deburring, in a single process. Errors during grinding may be minimised with the LSZ F VISION thanks to the clear view of the workpiece that it provides. This saves time and money, particularly when working on thin-walled components, e.g. car wings.

XT35 CROSS – extra-thin cutting and grinding with one disc.

The LSZ F VISION provides with three clever recesses an unobstructed view of the workpiece.

The XT8 EXACT makes cutting without hardly any burrs possible.

TOOL SET Weld grinding

PROFESSIONAL TOOL SET WELD GRINDING

This comprehensive set consisting of two brushes and two innovative products from the BRAINTOOLS range, allows work on welds to be carried out professionally. After hollow welds have been cleaned with brushes, the FUSION ensures that the welds are worked easily and efficiently. The product's unique design combines the benefits of a flap disc with those of a grinding disc. The soft deburring disc is designed so that it can be profiled and thus adapted perfectly to the shape of hollow welds. The VISION provides a full view of the whole workpiece while work is being carried out on any welds. This prevents tarnishing and the removal of too much stock.

Lower vibrations when grinding

WEB-VIDEO online:
www.sharpgrinding.com

Noticeable advantages for the user:

- For lower vibration when grinding
- More comfortable grinding
- Noticeable relief for strained parts of the body
- Greater comfort in working during grinding

BRAINTOOLS® RHODUCER

RHODUCER

BRAINTOOLS®

Its wear-resistant, elastic coating means the RHODUCER can very effectively absorb the vibrations that occur at the disc. The vibration load on the handle is reduced by up to 30%. Both factors can lead to a significant reduction of the vibration load and thus make for much more pleasant work and a noticeable physical relief of the affected parts of the body. The RHODUCER can be used with no problems on machines with a normal flange for all roughing wheels with a width of 4.5 mm and above.

Application examples:

- Surface grinding
- Edge grinding
- Welding seams

RHODUCER

Legal:

Stricter guidelines as protection against health-damaging influences have been in force since 06.03.2007 on the basis of the EC Directives 2002/44/EC and 2003/10/EC on the protection of employees against damaging noise and vibrations. Employers whose staff are confronted by vibrations during work must ensure compliance with the corresponding threshold values within the scope of their fiduciary duty.

Simple assembly within a few seconds

SE20

Ear muffs SE 20

Protection and comfort. Maximum protection! Top quality! Exemplary workmanship! Modern design! Your ears come in for some noise punishment when grinding. The SE20 protects your hearing. The padded steel headband resists even extreme loads. The foam padding and flexible, super-soft cushions offer maximum-comfort even if worn for prolonged periods of time. Size can be adjusted with telescopic height adjustment. SNR (Signal-to-Noise-ratio) 32.

SE20

	
1	900384

SE10

Safety goggle SE10

The panoramic lens of the SE10 permits an unrestricted, wide-angle view. Adjustable side clips guarantee an individual fit and the featherweight, one-part nylon frame combines maximum comfort during wear with fashionable styling. They also offer 99.9 % protection against UV radiation. These quality safety goggles are safety tested and bear the EN 166-F CE symbol.

SE10

	
1	900383

SE30

Leather gloves SE30

The best protection for your best tool - your hands. The sturdy all-leather working gloves are made of high grade calf leather and are suitable for all fields of use. The soft, well-processed leather makes them comfortable to wear and gives them a firm grip. Fully tested according to EN 388.

SE30

		
Size 10	12	900385

SE40

Dust mask SE40 with expiration valve

The mask is suitable when working with noxious and carcinogenic substances, smoke and water-based aerosols up to 10-times the lower toxic limit. The ActivForm means that the mask automatically adjusts to variously shaped faces. The special outer structure keeps the mask in optimum shape during the entire period of use. The exhale valve prevents the glass steaming up during expiration. Ideal for wearers of glasses.
